

AI Recording App in Use

We use technology to improve your care. This may include an Artificial Intelligence tool that helps your doctor by creating a first draft of the note on your chart. This has several benefits:

- Lets your doctor focus on you and not on typing
- Frees up doctors' time to see more patients
- Helps with more accurate documentation

We ensure the privacy of your personal health information, and your doctor personally edits and approves any notes on your chart.

Any questions? Ask!

As a patient, you have the right to decline the use of AI technology during your visit.
