

FRIDAYS AT THE UNIVERSITY

Wound Care Day

Join us for an interactive and practical session dedicated to improving outcomes in diabetic foot care. You'll gain a deeper understanding of the global burden of diabetic foot disease and its impact on patients, while building hands-on skills in wound assessment and debridement. The session also covers how to differentiate and select the most appropriate wound dressings based on clinical needs. Leave with greater confidence and competence in managing this complex and critical aspect of patient care.

Learning Objectives

By the end of the day, the participants should be able to:

- Describe the global burden of diabetic foot disease and explain its impact on patient outcomes.
- Demonstrate the steps of wound debridement in a simulated or clinical setting.
- Differentiate between wound dressing types and select the appropriate dressing based on clinical indications.
